```

```
DefConstantSymbol[M3, PrintAs →
   "\!\(\*SubscriptBox[\(ℳ\)\(\*OverscriptBox[\(κ\),\((2)\)]\),\(3\)]\)"];
```

Now we try to load the binary file. This is done with the "Get" command.

```
Get["ParticleSpectrographCMExample.mx"];
```

Note that the name of the binary is always "ParticleSpectrograph<string>.mx". As you know from the docs, the value of "<string>" is precisely the string that you pass to the option "TheoryName". When you load the binary file, a variable (not a string) with precisely that name is created in the kernel. The variable is defined as an association (look up how to use these).

```
Print[CMExample];
```

$\langle\,|\,\texttt{WaveOperator} \to \left\{\left\{\left\{-\frac{3}{2}\left(k^2 \overset{(4)}{\kappa}_1 + \overset{(2)}{\kappa}_2\right), 0\right\}, \{0, 0\}\right\}, \left\{\{0, 0, 0, 0\},\right.\right.$

Note that the contents of the association only have pretty formatting if you have loaded the package xAct`PSALTer` and also defined the field and coupling coefficients as above.

Key observation: As you can see, I cocked up the keys. By default the key for the saturated propagator is "SourceConstraints" and the key for the source constraints is a large and meaningless Wolfram Language expression. To fix this, please run the following script on each association before using it:

```
UnfuckKeys[InputAssoc_] := Module[{Expr = InputAssoc, AllKeys, GrossKey,
    ComponentSaturatedPropagatorValue, ComponentSourceConstraintsValue},
   AllKeys = Keys[Expr]; GrossKey = First[Cases[AllKeys, _?AssociationQ]];
   ComponentSaturatedPropagatorValue = Expr[SourceConstraints];
   ComponentSourceConstraintsValue = Expr[GrossKey];
   Expr //= KeyDrop[#1, SourceConstraints] & ; Expr //= KeyDrop[#1, GrossKey] & ;
   Expr[ComponentSaturatedPropagator] = ComponentSaturatedPropagatorValue;
   Expr[ComponentSourceConstraints] = ComponentSourceConstraintsValue;
   Expr]; CMExample //= UnfuckKeys;
```

Check the components:

```
Expr = CMExample[ComponentSaturatedPropagator]; Print[Expr];
```
